

Earth and Moon

Earth is a planet

Moon is a satellite

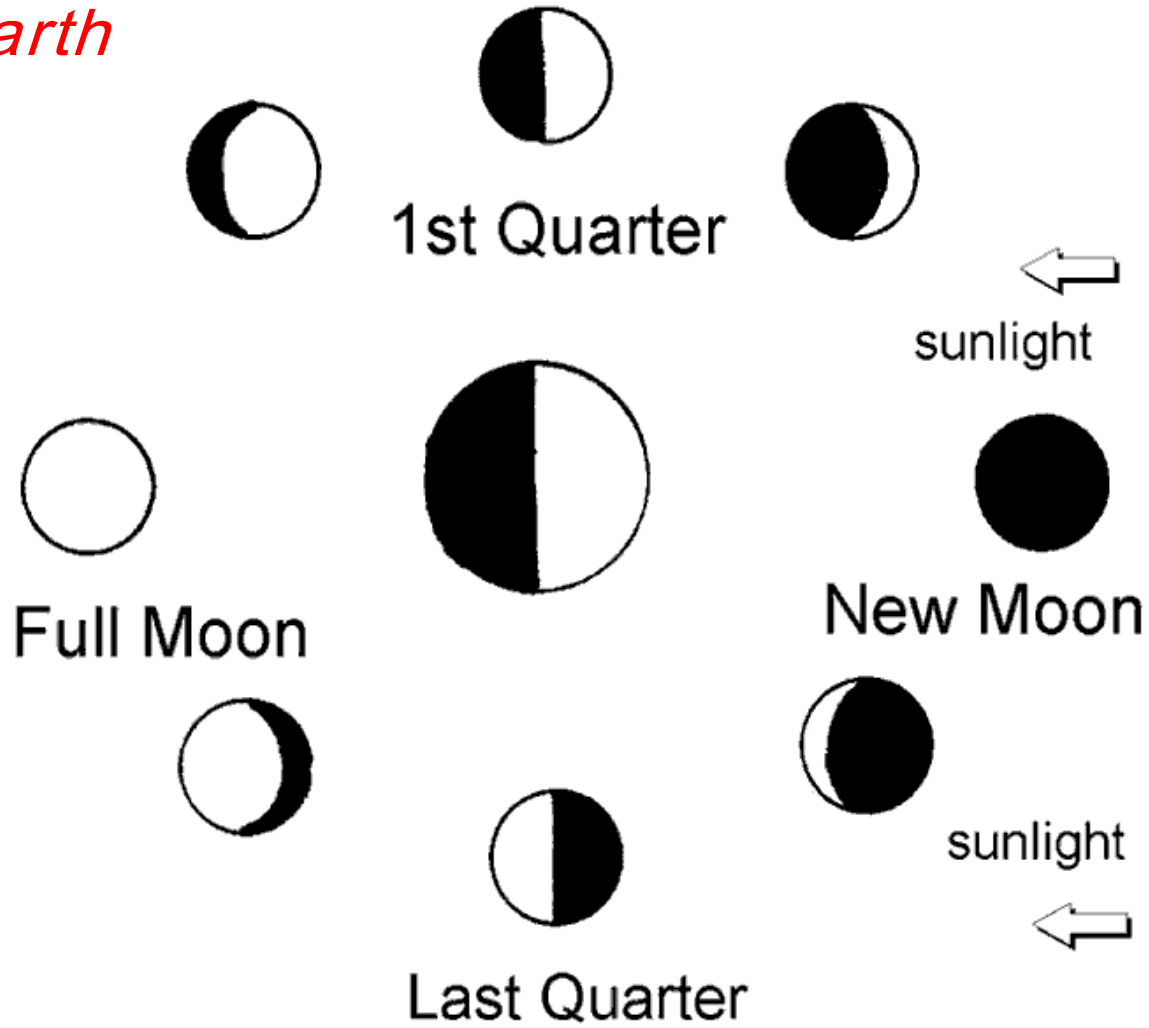

*The Earth
rotates on its axis*

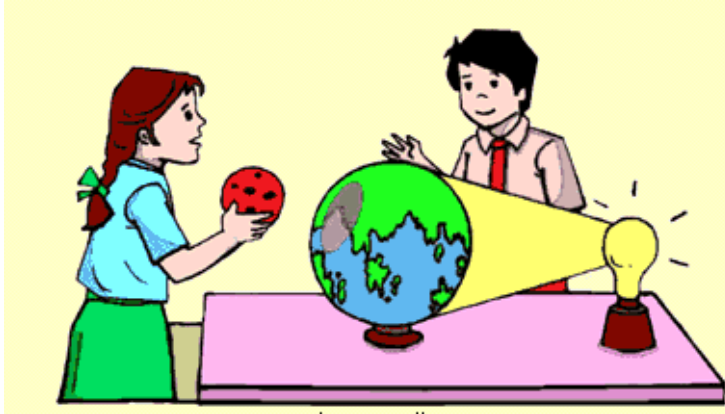

*The Moon rotates
on its axis*

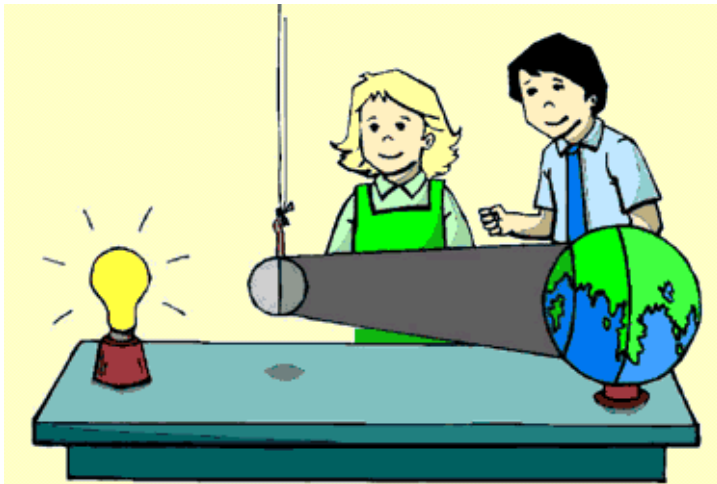

The Moon revolves around the Earth

causing different phases of the Moon

*Lunar Eclipse,
Earth between Sun
and Moon*

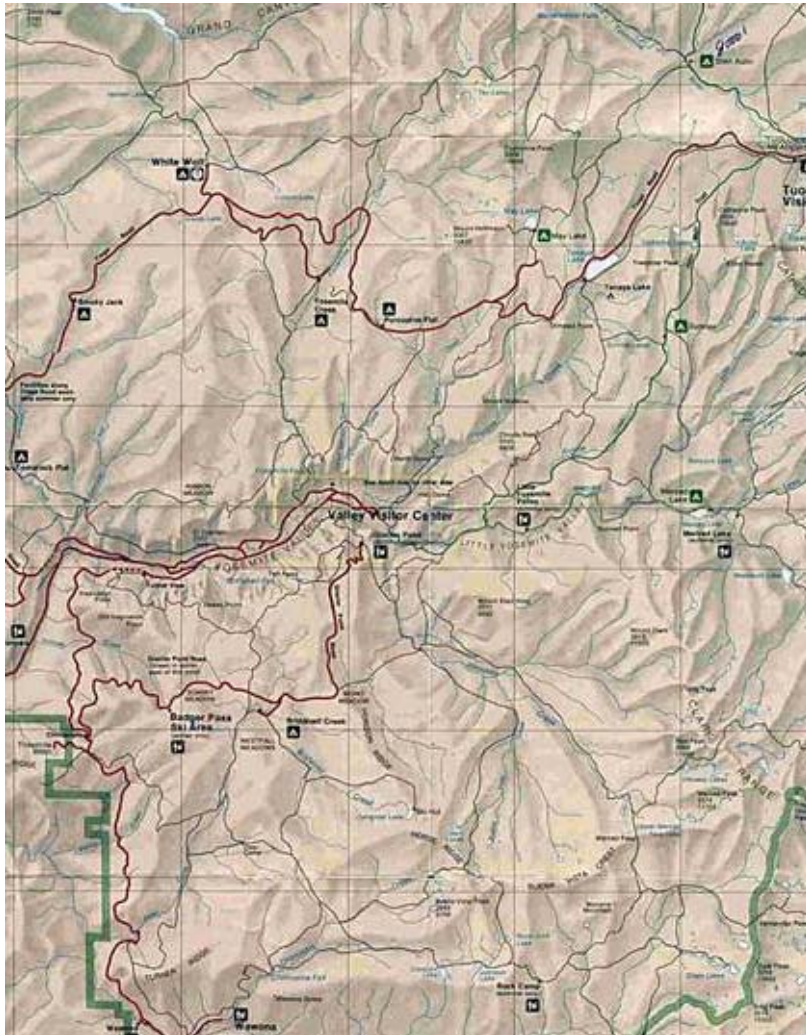

*Solar Eclipse,
Moon between Sun
and Earth*

lunar surface

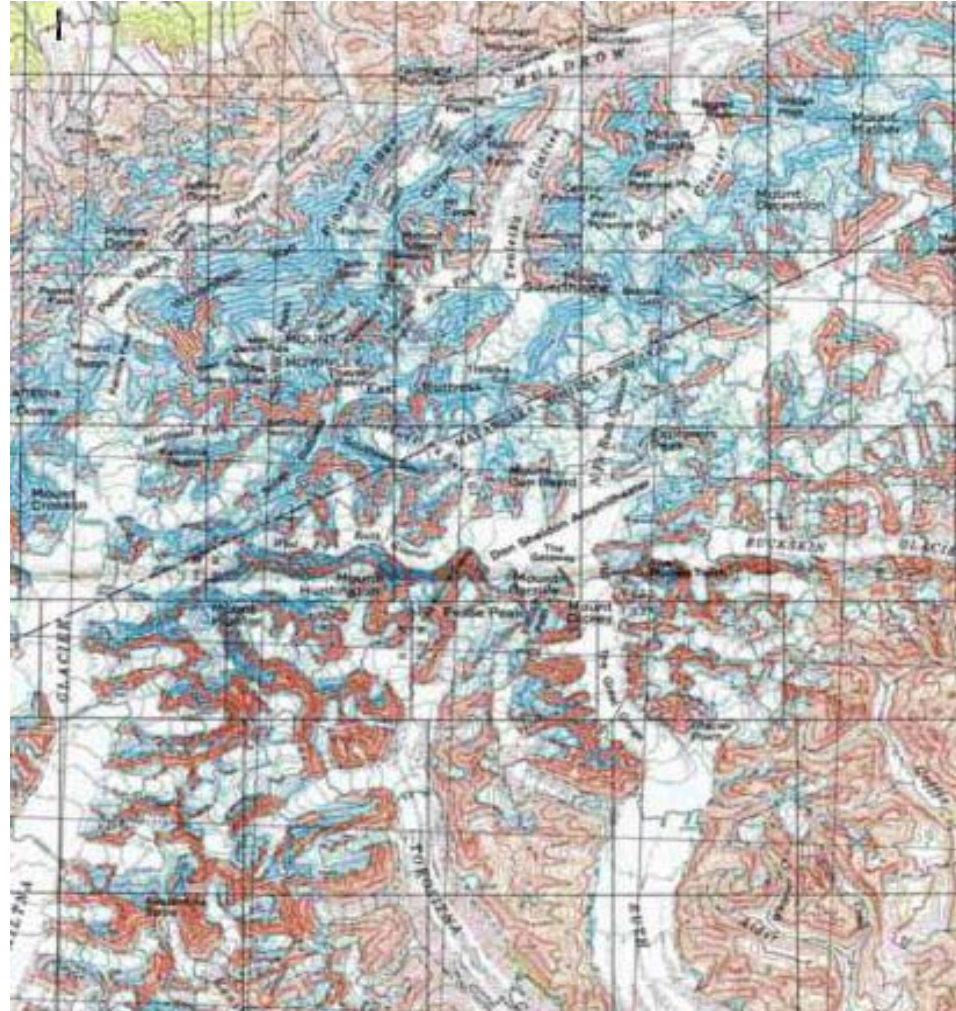

*The Earth is different from most planets
because of landforms formed by water*

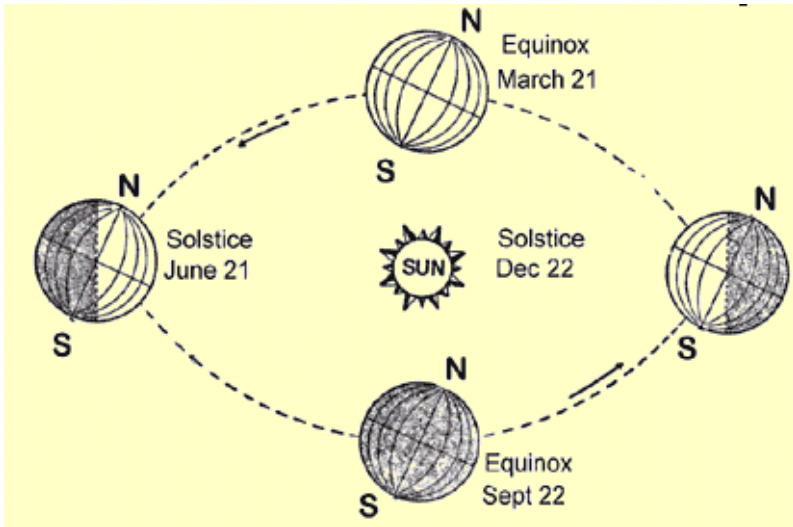

Streams and rivers cause "V" shape valleys

Glacials cause "U" shaped valleys.

Seasons are caused by the quality of light due to the tilting of the Earth's axis

Moon and Earth Attract each other

Spring tides (high)

Neap tides (low)
